## *Exhibition Hyacinths*

### CADWELL & JONES SPECIAL

The outdoor cultivation of Hyacinths is quite similar to that of Tulips, except that the bulbs should be set farther apart—about 8 to 10 inches. For house culture pot the bulbs any time from September to December, using a light, rich soil and bone fertilizer. Place the pots outdoors and cover them with 4 to 6 inches of leaves. After 10 to 12 weeks they may be brought indoors a few at a time.

If Hyacinths are grown in glasses the bases of the bulbs should barely touch the water. The glasses should be set in a cool, dark place until they are full of roots.

Principally used for forcing; trusses and blooms very large if given proper attention.

35c. each; \$3.75 per doz.; \$30.00 per 100

## Narcissus or Daffodils

We have been successful in securing bulbs grown under highly favorable conditions. The brilliant blooms of the Narcissus appear from March until well into May. The early blooming period and their handsome appearance, whether in large masses or as individual flowers, make them perhaps the most popular Spring-flowering bulbs. Plant the bulbs from 4 to 6 inches apart, depending upon the variety, and cover them to one and one-half times their depth. Bonemeal makes an ideal fertilizer; fresh stable manure should never be used.

#### **HOW TO MAKE A LAWN**

To prepare a good lawn you must have seed of the proper kind and use plenty of it; you cannot produce a beautiful lawn with ordinary hay seed. Next in importance is the proper preparation of the soil. Spade or plow it to a depth of at least 6 inches; fertilize freely and make the surface fine, free from clods, and perfectly level, avoiding uneven spots.

When planting in the fall, sow before the autumn rains have ceased—in the spring sow the seed as early as possible, after raking the surface of the soil very fine. Cover by rolling with a light roller of not more than 200 lbs.
